

YMCA Family Camp – COVID Guidelines

The health and safety of our campers and staff remains in the forefront of our programming decisions. To set protocols for health and safety at camp we reference the Center for Disease Control (CDC), American Camp Association (ACA) and Minnesota Department of Health (MDH) for guidance.

Below you will find COVID-19 related protocol as of June 2022. This may change depending on the current level of community spread and changing recommendations.

GENERAL HEALTH & SAFETY

- Camper families should monitor their health, particularly COVID-19 symptoms, prior to the start and throughout their camp session.
- Masking is required in all indoor communal spaces.
- Camp will continue to monitor CDC guidelines and respond accordingly to determine masking requirements.

CAMPER PRE ARRIVAL

Y of the North strongly recommends that all eligible campers be fully vaccinated (including booster) prior to the start of their camp session.

We ask that families monitor their health, particularly COVID-19 symptoms, prior to the start of their camp session.

RESPONSE TO POSITIVE TEST

If a camper becomes symptomatic during their time at camp, testing for COVID-19 may be considered. Staff leadership will work together with camper families to ensure the community remains safe. Depending on the circumstances and symptoms, camper families may be asked to isolate or end their session early.

STAFF

Y of the North staff are expected to be fully vaccinated (including booster) prior to the start of summer. For staff unable to be fully vaccinated, weekly COVID-19 testing will be required.

If a staff member tests positive for COVID-19, measures are in place to ensure the safety of our community.
